- FUNCTION: Has a neutrophil chemotactic regulator of chondrocyte proliferation.
                                                                                                                                                                                                                                                                                                                                                   IsoId=088803-2; Sequence=VSP_003051; TISSUE SPECIFICITY: Highly expressed in liver an testis. Not expressed in heart, brain, spleen, 1 muscle and kidney.
SIMILARITY: Belongs to the LECT2 / MIM-1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Name=1; Synonyms=LECT2;

(IMMU-) IMMUNOGEN INC.

WPI; 2004-091350/09.

This invention relates to a novel isolated monoclonal antibody that specifically binds to an epitope of a non-shed extracellular portion of a shed antigen or of human Mucl or Mucl6 protein. The invention may be useful for the development of compounds with a cytostatic or for gene therapy. The composition and methods are useful in diagnosing, treating or monitoring malignancies, such as breast or ovarian cancer. The present sequence is that of a peptide which was used for raising antibodies to the extracellular, non-shed region of Mucl6 and which is claimed in the

Sequence 28 AA; specification. New antibody to non-shed human Muc1 or Muc16, useful for diagnosing, treating or monitoring malignancies, such as breast or ovarian cance

Claim 14; SEQ ID NO 18; 113pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antibody to non-shed human Muc1 or Muc16, useful for diagnosing, treating or monitoring malignancies, such as breast or ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                specifically binds to an epitope of a non-shed extracellular portion can shed antigen or of human Muci or Mucl6 protein. The invention may be useful for the development of community with a cytostatic or for gene therapy. The composition and methods are useful in diagnosing, treating or monitoring malignancies, such as breast or ovarian cancer. The presequence is that of a Muc epitope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         03-JUL-2002; 2002US-0393094P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human Muc16

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to a novel isolated monoclonal antibody that specifically binds to an epitope of a non-shed extracellular portion of a shed antigen or of human Mucl or Mucl6 protein. The invention may be useful for the development of compounds with a cytostatic or for gene therapy. The composition and methods are useful in diagnosing, treating or monitoring malignancies, such as breast or ovarian cancer. The present sequence is that of the human Mucl6 GST fusion protein which was used in
                                                                                                                                                                                               Human cancer linked protein referred to as 192292 SeqID 4.
                                                                                                                                                                                                                                                                                                                                ADM30756 standard; protein; 174

Reed SG,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention relates to a novel method of identifying an agent that modulates the activity of a cancer-related gene. Specifically, it refers to a screening assay to identify potential antitumour agents, as well as methods to assess the cancerous state of a cell. The present invention describes antibodies against the expression products of these cancer-related genes that are capable of targeting a cancerous cell in vivo. Furthermore it provides immuno-conjugates containing such antibodies, which can be used to deliver target therapeutics thereto. Accordingly, these compositions that exhibit cytostatic and immunostimulant activities are useful for preventing or treating cancer in humans and in particular the treatment of ovarian cancer. This polypeptide sequence is a protein encoded by a human cancer-linked gene of the invention.

      The invention relates to an isolated O772P polypeptide, which has the structure fully defined in the specification. The composition containing the polypeptides, polynucleotides, fusion proteins, antibodies, T-cells or antigen presenting cells are useful for stimulating an immune response and treating ovarian cancer. Detecting the presence of the polynucleotides and polypeptides is useful for diagnosing cancer. Ovarian carcinoma cDNAs and protein cDNAs were identified using microarray
                                                                                                                                                                                               Mitcham ,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to polypeptides comprising an immunogenic portion of an ovarian carcinoma protein which acts as an immunostimulant and is cytostatic. The polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells that express the polypeptides are useful for stimulating an immune response in a patient and treating ovarian cancer. This sequence represents protein related to the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SXC
                                         The invention describes nucleic acids (I) and the polypeptides (II) they cencode. The nucleic acids (I) may be used for preventing, diagnosing and treating diseases related to their aberrant expression i.e. breast cancers. For example, (I) and (II) may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (II) by expressing inactive proteins or to supplement the patients own production of (II). Additionally, (I) may be used to produce (II), by inserting (I) into a host cell and culturing the cell to express the protein (II). (I) And its complementary sequences may also be used as DNA probes in diagnostic complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The host cell may also be used as antigens in the production of antibodies against (II) and in assays to identify modulators of (II)'s expression and activity. The anti-(II) antibodies, agonists and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                              This invention relates to polypeptides comprising an immunogenic portion of an ovarian carcinoma protein which acts as an immunostimulant and is cytostatic. The polypeptides polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells that express the polypeptides are useful for stimulating an immune response in a patient and treating ovarian cancer. This sequence represents protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mitcham
Reed SG,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated 0772P polypeptide, which has the structure fully defined in the specification. The composition containing the polypeptides, polynucleotides, fusion proteins, antibodies, T-cells or antigen presenting cells are useful for stimulating an immune response and treating ovarian cancer. Detecting the presence of the polynucleotides and polypeptides is useful for diagnosing cancer. Ovarian carcinoma cDNAs and protein cDNAs were identified using microarray
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated 0772P polypeptides and polynucleotides, useful in gene therapy, particularly for treating or diagnosing cancer, e.g. ovarian

                                                                                                                                                                                                                                                                                                                                                                                                                                                     cancers. For example, (I) and (II) may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (II) by expressing inactive proteins or to supplement the patients own production of (II). Additionally, (I) may be used to produce (II), by inserting (I) into a host cell and culturing the cell to express the protein (II). (I) And its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The host cell may also be used as antigens in the production of antibodies against (II) and in assays to identify modulators of (II)'s expression and activity. The anti-(II) antibodies, against may be used to regulate expression and activity and as diagnostic agents for detecting the presence of (II) in samples (e.g. by improved the contractive to the presence of (II) in samples (e.g. by improved the contractive to the presence of (II) in samples (e.g. by improved the contractive to the presence of (II) in samples (e.g. by improved the contractive to the presence of (II) in samples (e.g. by improved the contractive to the presence of (II) in samples (e.g. by improved the contractive to the contractive to the contractive to the presence of (II) in samples (e.g. by improved the contractive to the contra

                                                                                                                                                                                               CC CA125 repeat domains, nucleic acids (including variants, homologues and CC degenerate versions) encoding CA125 proteins or repeat units, a vector CC comprising the nucleic acid, a cultured cell comprising the vector, a CC method of expressing CA125 antigen in a cell, the amino acid sequences of Ct the CA125 repeat units (or their variants, fragments or sequences of Ct the CA125 repeat units (or their variants, fragments or sequences of cepitope in the receptor-binding domain of CA125 protein, a diagnostic for CC detecting and monitoring the presence of CA125 antigen (comprising CC recombinant CA125 having at least one repeat unit of the CA125 repeat CC disease or CA125 antigen levels or at risk of developing a CC disease or disease or currence associated with elevated CA125 antigen levels (comprising recombinant CA125 repeat domains including epitope binding sites) and an antisense oligonucleotide that inhibits the CC expression of CA125. The CA125 molecule, particularly the multiple repeat domains are useful as a gold standard for detecting and monitoring the presence of CA125 antigen, which can be used for diagnosing, monitoring CC is expressed. The molecules are also useful for developing a vaccine CC against cancer. The present sequence is a CA125 repeat protein
                                                                                                           Query Match

The polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells that express the polypeptides are useful for stimulating an immune response in a patient and treating ovarian cancer. This sequence represents protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Polypeptides comprising an immunogenic portion of an ovarian carcinoma protein or its variants, useful for stimulating an immune response in patient and treating ovarian cancer.

                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated 0772P polypeptide, which has the structure fully defined in the specification. The composition containing the polypeptides, polynucleotides, fusion proteins, antibodies, T-cells or antigen presenting cells are useful for stimulating an immune response and treating ovarian cancer. Detecting the presence of the polynucleotides and polypeptides is useful for diagnosing cancer. Ovarian carcinoma cDNAs and protein cDNAs were identified using microarray technology. The present sequence represents a human ovarian carcinoma
                                                                                        gene th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated O772P polypeptides and polynucleotides, useful in therapy, particularly for treating or diagnosing cancer, e.g. \epsilon

                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes nucleic acids (I) and the polypeptides (II) they CC encode. The nucleic acids (I) may be used for preventing, diagnosing and CC treating diseases related to their aberrant expression i.e. breast CC cancers. For example, (I) and (II) may be used to treat disorders CC associated with decreased expression by rectifying mutations or deletions CC in a patient's genome that affect the activity of (II) by expressing CC inactive proteins or to supplement the patients own production of (II). CC Additionally, (I) may be used to produce (II), by inserting (I) into a CC complementary sequences may also be used as DNA probes in diagnostic CC cassays to detect and quantitate the presence of similar nucleic acids in CC cassays to detect and quantitate the presence of similar nucleic acids in CC cantibodies against (II) and in assays to identify modulators of (II) and continuous continuous caseave to activity. The anti-(II) antibodies, agonists and CC cantagonists may be used to regulate expression and activity and as CC diagnostic agents for detecting the presence of (II) in samples (e.g. by immunoassay). This sequences represents a secreted ovarian carrinoma.
                                                                                                                                                                                                                                                                                                                                                                              Matches

CC AAD20618-AAD20624 represent cDNAs corresponding to 7 human ovarian and CC ovarian cancer associated protein (collectively known as ovarian cancer CC antigens) genes, and AAE12623-AAE12629 represent the proteins they CC encode. AAE12630-AAE12638 represent human ovarian cancer antigenic CC fragments or variants. Ovarian cancer antigens and their corresponding CC DNAs are used in the prevention, diagnosis and treatment of diseases CC associated with their inappropriate expression. These disorders include CC proliferative disorders, cancer, tumours, respiratory system disorders, Ca sthma, haemacopoietic disorders, diseases of the immune system, AIDS, CC skin disorders, autoimmune diseases (e.g., rheumatoid arthritis), CC inflammation, allergies, neurological disorders (e.g., Alzheimer's CC disease, Parkinson's disease), septic shock, diabetes, atherosclerosis, CC cardiovascular disorders, angiogenic disorders and infections. The CC proteins can also be used to aid wound healing and epithelial cell C proteins can also be used to aid wound healing and epithelial cell C proteins can also be used to aid wound healing and epithelial cell C proliferation, to identify their cognate ligands or binding CC spatrners, in chemotaxis and can be used as a food additive. Antibodies Specific for a protein of the invention can be used in alleviating CC specific for a protein of the invention can be used in alleviating CC specific for a protein of the invention can be used in diagnostic CC immunoassasys e.g., enzyme linked immunosorbent assay (ELISA). The DNA of CC the invention is used in gene therapy. The present sequence represents a CC the invention cancer antigenic fragment of the invention

                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        seq length: 0

```

```
A;Description: catalyzes the formation of gamma-aminobutyric acid,
A;Note: in E. coli, two isoforms (alpha and beta) have been found,
C;Superfamily: Escherichia coli glutamate decarboxylase
C;Keywords: carbon-carbon lyase; carboxy-lyase; homohexamer; phosph
F;276/Binding site: pyridoxal phosphate (Lys) (covalent) #status px
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A; Map position:

          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    B B
